

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for identifying latent demand for at least one of a plurality of commodities, the method comprising:

analyzing with at least one computing device at least a plurality of initially unaccepted offers for each of the plurality of commodities; and

selecting with the at least one computing device at least one of the plurality of commodities to offer for sale which satisfies at least one criteria that identifies a latent demand in the selected one of the plurality of commodities based on the analyzing.

2. (Original) The method as set forth in claim 1 wherein the analyzing further comprises:

determining an average offer for each of the plurality of commodities from the offers for each of the plurality of commodities; and

dividing each of the average offers for each of the plurality of commodities by a total number of items in each of the plurality of commodities to obtain an analyzed value for each of the plurality of commodities.

3. (Original) The method as set forth in claim 2 wherein the at least one criteria is the analyzed value with the highest numerical value.

4. (Original) The method as set forth in claim 1 further comprising; averaging the offers for at least the selected one of the plurality of commodities; and

selecting a price for the selected one of the plurality of commodities based on the average.

5. (Original) The method as set forth in claim 4 wherein the price for the selected one of the plurality of commodities is the average.

6. (Currently Amended) The method as set forth in claim 1 wherein at least one of the plurality of commodities is a combination[[s]] of two or more items.

7. (Original) The method as set forth in claim 1 further comprising obtaining the offers for each of the plurality of commodities.

8. (Original) The method as set forth in claim 7 wherein the offers on the plurality of commodities are obtained from at least two different sources.

9. (Currently Amended) A system for identifying latent demand for at least one of a plurality of commodities, the system comprising:

an offer analyzer comprising at least one computing device that analyzes at least a plurality of initially unaccepted offers for each of the plurality of commodities; and

a commodity selector comprising the at least one computing device that selects at least one of the plurality of commodities to offer for sale which satisfies at least one criteria that identifies a latent demand in the selected one of the plurality of commodities based on the analysis by the offer analyzer.

10. (Original) The system as set forth in claim 9 wherein the offer analyzer further comprises:

a determiner that determines an average offer for each of the plurality of commodities from the offers for each of the plurality of commodities; and

a divider system that divides each of the average offers for each of the plurality of commodities by a total number of the items in each of the plurality of commodities to obtain an analyzed value for each of the plurality of commodities.

11. (Original) The system as set forth in claim 10 wherein the at least one criteria is the analyzed value with the highest numerical value.

12. (Original) The system as set forth in claim 9 further comprising;

an averager that averages the offers for at least the selected one of the plurality of commodities; and

a price selector that selects a price for the selected one of the plurality of commodities based on the average.

13. (Currently Amended) The system as set forth in claim 12 wherein the price selector selects the average price for the selected one of the plurality of commodities~~is the average.~~

14. (Currently Amended) The system as set forth in claim 9 wherein at least one of the plurality of commodities selected by the commodity selector is a combination[[s]] of two or more items.

15. (Original) The system as set forth in claim 9 further comprising at least one source for the offers for each of the plurality of commodities.

16. (Currently Amended) A computer readable medium having stored thereon instructions for identifying latent demand for at least one of a plurality of commodities which when executed by a processor, cause the processor to perform the steps of:

analyzing at least a plurality of initially unaccepted offers for each of the plurality of commodities; and

selecting at least one of the plurality of commodities to offer for sale which satisfies at least one criteria that identifies a latent demand in the selected one of the plurality of commodities based on the analyzing.

17. (Original) The medium as set forth in claim 16 wherein the analyzing further comprises:

determining an average offer for each of the plurality of commodities from the offers for each of the plurality of commodities; and

dividing each of the average offers for each of the plurality of commodities by a total number of items in each of the plurality of commodities to obtain an analyzed value for each of the plurality of commodities.

18. (Original) The medium as set forth in claim 17 wherein the at least one criteria is the analyzed value with the highest numerical value.

19. (Original) The medium as set forth in claim 16 further comprising;
averaging the offers for at least the selected one of the plurality of
commodities; and
selecting a price for the selected one of the plurality of commodities
based on the average.

20. (Original) The medium as set forth in claim 19 wherein the price for the
selected one of the plurality of commodities is the average.

21. (Currently Amended) The medium as set forth in claim 16 wherein at
least one of the plurality of commodities is a combination[[s]] of two or more items.

22. (Original) The medium as set forth in claim 16 further comprising
obtaining the offers for each of the plurality of commodities.

23. (Original) The medium as set forth in claim 22 the offers on the plurality
of commodities are obtained from at least two different sources.

24. (Currently Amended) A method for selling a commodity, the method
comprising:
analyzing with at least one computing device a plurality of offers for a
plurality of commodities in an auction using a determined criteria;
selecting with the at least one computing device ~~the~~ at least one of the
plurality of commodities based on the analysis of the determined criteria that identifies a
latent demand in the selected one of the plurality of commodities; and
offering to sell the at least one selected commodity for a price based on
an average offer for the commodity.

25. (Original) The method as set forth in claim 24 wherein the analyzing
further comprises:
determining an average offer for each of the plurality of commodities
from the offers for each of the plurality of commodities; and

dividing each of the average offer for each of the plurality of commodities by a total number of items in each of the plurality of commodities to obtain an analyzed value for each of the plurality of commodities.

26. (Original) The method as set forth in claim 24 wherein the at least one determined criteria is the analyzed value with the highest numerical value.

27. (Original) The method as set forth in claim 24 wherein the price for the selected one of the commodities is the average.

28. (Currently Amended) The method as set forth in claim 24 wherein at least one of the commodities is a combination[[s]] of two or more items.

29. (Original) The method as set forth in claim 24 further comprising obtaining the offers for each of the commodities.

30. (Original) The method as set forth in claim 29 wherein the offers on the commodities are obtained from at least two different sources.

31. (Currently Amended) A system for selling a commodity, the ~~method~~ system comprising:

a commodity analyzing apparatus comprising at least one computing device that analyzes ~~for analyzing~~ a plurality of offers for a plurality of commodities in an auction using a determined criteria;

a commodity selecting apparatus comprising the at least one computing device that selects ~~for selecting~~ at least one of the plurality of commodities that identifies a latent demand in the selected one of the plurality of commodities based on the analysis of the determined criteria; and

a commodity offering system for offering to sell the selected commodity for a price based on an average offer for the commodity.

32. (Currently Amended) ~~The system as set forth in claim 31~~ A system for selling a commodity, the system comprising:

a commodity analyzing apparatus for analyzing a plurality of offers for a plurality of commodities in an auction using a determined criteria;

a commodity selecting apparatus for selecting at least one of the commodities based on the analysis of the determined criteria; and

a commodity offering system for offering to sell the selected commodity for a price based on an average offer for the commodity.

wherein the offer analyzer further comprises:

a determiner that determines an average offer for each of the plurality of commodities from the offers for each of the plurality of commodities; and

a divider system that divides each of the average offers for each of the plurality of commodities by a total number of the items in each of the plurality of commodities to obtain an analyzed value for each of the plurality of commodities.

33. (Original) The system as set forth in claim 32 wherein the at least one criteria is the analyzed value with the highest numerical value.

34. (Currently Amended) ~~The system as set forth in claim 31~~ A system for selling a commodity, the system comprising:

a commodity analyzing apparatus for analyzing a plurality of offers for a plurality of commodities in an auction using a determined criteria;

a commodity selecting apparatus for selecting at least one of the commodities based on the analysis of the determined criteria; and

a commodity offering system for offering to sell the selected commodity for a price based on an average offer for the commodity.

wherein the price for the selected one of the plurality of commodities is the average.

35. (Currently Amended) The system as set forth in claim 31 wherein at least one of the plurality of commodities is a combination[[s]] of two or more items.

36. (Original) The system as set forth in claim 31 further comprising at least one source for the offers for each of the plurality of commodities.
